

The Psychology Of Instant Shopping: An Analytical Review Of Consumer Behaviour In Quick Commerce

Vedanshi Sharma

Ph.D Scholar (Business Administration), University College of Commerce &
Management Studies, Mohanlal Sukhadia University, Udaipur, India

Abstract

The Rapid Growth Of Quick Commerce (Q-Commerce) Has Significantly Changed The Way Consumers Purchase Everyday Products By Combining Digital Technology, Ultra-Fast Delivery, And Convenience-Oriented Services. This Transformation Has Shifted Consumer Purchasing Behaviour From Planned Shopping To More Immediate And Spontaneous Buying Decisions. This Study Aims To Analyse The Psychological Factors Influencing Instant Shopping Behaviour In The Quick Commerce Environment, With A Particular Focus On Impulse Buying, Instant Gratification, Perceived Convenience, Trust, Time Pressure, And Digital Engagement. The Study Is Based Exclusively On Secondary Data And Adopts An Analytical Review Approach By Critically Examining Peer-Reviewed Journal Articles, Books, Industry Reports, And Other Credible Academic Sources. The Collected Literature Is Systematically Analysed To Identify The Key Behavioural Patterns And Psychological Drivers Associated With Consumer Decision-Making In Quick Commerce. Unlike Many Existing Studies That Have Examined Only Individual Psychological Constructs, The Present Analytical Review Integrates Multiple Behavioural Factors Within A Single Conceptual Framework To Provide A Comprehensive Understanding Of Instant Shopping Behaviour In Quick Commerce. The Study Contributes To The Existing Literature By Offering A Comprehensive Understanding Of Consumer Behaviour In Technology-Enabled Retailing And The Findings May Assist Researchers, Marketers, And Quick Commerce Platforms In Understanding Evolving Consumer Psychology And Designing More Effective Consumer-Centric Strategies While Identifying Promising Avenues For Future Research.

Keywords: Quick Commerce (Q-Commerce), Consumer Behaviour, Instant Shopping, Consumer Psychology, Impulse Buying, Instant Gratification, Digital Retail, Perceived

Convenience.

Objectives Of The Study

1. To Analyse The Major Psychological Factors Influencing Instant Shopping Behaviour In Quick Commerce.
2. To Examine The Role Of Impulse Buying, Instant Gratification, Perceived Convenience, Trust, Time Pressure, And Digital Engagement In Consumer Decision-Making.
3. To Critically Synthesise Existing Literature On Consumer Psychology In Quick Commerce.
4. To Identify Emerging Behavioural Trends Influencing Instant Shopping.
5. To Suggest Future Research Directions And Managerial Implications For Quick Commerce Platforms.

Introduction

Over The Past Two Decades, Technological Innovation And Digital Transformation Have Fundamentally Changed The Retail Industry Across The World. Increasing Internet Penetration, Smartphone Adoption, And Digital Payment Systems Have Shifted Consumer Purchasing Behaviour From Traditional Retail Stores Towards Technology-Enabled Online Shopping Platforms. As Consumer Expectations Continue To Evolve, Convenience, Speed, And Accessibility Have Become Essential Elements Of The Modern Shopping Experience. These Changing Expectations Have Accelerated The Emergence Of Quick Commerce (Q-Commerce), A Retail Model That Emphasises Rapid Order Fulfilment Through Technology-Enabled Platforms And Hyperlocal Delivery Networks (Mukhopadhyay, 2024; Kaur & Sharma, 2024).

The Widespread Use Of Smartphones, Artificial Intelligence, Location-Based Services, And Advanced Logistics Networks Has Accelerated The Expansion Of Quick Commerce, Particularly In Urban Markets. In Countries Such As India, Changing Lifestyles, Increasing Work Pressure, And Growing Dependence On Mobile Applications Have Encouraged Consumers To Prefer Rapid Delivery Services For Everyday Products. Consequently, Shopping Has Become An Immediate And On-Demand Activity Rather Than A Carefully Planned Process (Jose & Mathews, 2025; Mukhopadhyay, 2024).

The Rapid Expansion Of Quick Commerce Has Not Only Transformed Retail

Operations But Has Also Altered The Way Consumers Make Purchasing Decisions. Unlike Conventional Shopping, Where Consumers Often Compare Alternatives And Spend Time Evaluating Products, Quick Commerce Encourages Faster Decision-Making By Offering Immediate Product Availability, Simplified Ordering Processes, Personalised Recommendations, And Rapid Delivery. These Developments Have Created A New Shopping Environment In Which Consumer Decisions Are Increasingly Influenced By Behavioural And Psychological Factors Alongside Traditional Economic Considerations (Chen Et Al., 2023).

Concept Of Quick Commerce

Quick Commerce (Q-Commerce) Refers To A Technology-Driven Retail Model That Focuses On Delivering Products To Consumers Within A Very Short Period, Generally Ranging From 10 To 30 Minutes After An Order Is Placed. It Represents An Advanced Form Of E-Commerce That Prioritises Speed, Convenience, And Immediate Fulfilment Of Consumer Needs. The Operational Model Of Quick Commerce Relies On Hyperlocal Fulfilment Centres, Digital Platforms, Real-Time Inventory Management, Artificial Intelligence, And Efficient Last-Mile Delivery Systems To Ensure Rapid Service (Mukhopadhyay, 2024).

Unlike Conventional E-Commerce, Which Primarily Competes Through Extensive Product Assortment And Competitive Pricing, Quick Commerce Is Designed To Minimise Waiting Time And Maximise Convenience. Consumers Are Able To Access Essential Products Through User-Friendly Mobile Applications, Complete Secure Digital Payments, And Receive Deliveries Within A Limited Time Frame. This Combination Of Technological Innovation And Operational Efficiency Has Positioned Quick Commerce As One Of The Fastest-Growing Segments Of The Digital Retail Industry, Particularly In Urban Markets Where Consumers Increasingly Value Time-Saving Solutions (Jose & Mathews, 2025).

Consumer Behaviour In Quick Commerce

Consumer Behaviour Refers To The Process Through Which Individuals Identify Their Needs, Evaluate Available Alternatives, Make Purchasing Decisions, And Assess Their Consumption Experiences. Within The Quick Commerce Environment, Consumer Behaviour Has Evolved Beyond Traditional Planned Purchasing And

Increasingly Reflects Immediate, Convenience-Oriented Decision-Making. The Availability Of Products Within Minutes, Easy Mobile-Based Ordering, Personalised Product Suggestions, Promotional Offers, And Seamless Payment Options Have Significantly Influenced Consumers' Shopping Patterns (Bao & Yang, 2022).

The Quick Commerce Environment Has Encouraged Consumers To Place Smaller But More Frequent Orders, Reducing The Tendency To Plan Purchases Well In Advance. Rather Than Focusing Solely On Price Or Product Variety, Consumers Often Prioritise Delivery Speed, Convenience, Reliability, And Overall Shopping Experience. As A Result, Purchasing Decisions Are Becoming More Spontaneous And Are Increasingly Shaped By Situational Factors That Emerge During The Shopping Process (Thurasamy Et Al., 2024).

Understanding Consumer Behaviour In The Context Of Quick Commerce Requires More Than Analysing Purchasing Patterns Alone. It Is Equally Important To Examine The Psychological Mechanisms That Motivate Consumers To Make Instant Purchasing Decisions. Behavioural Factors Such As Impulse Buying, Instant Gratification, Perceived Convenience, Trust In Digital Platforms, Time Pressure, And Digital Engagement Have Become Increasingly Relevant In Explaining Why Consumers Choose To Purchase Immediately Rather Than Postpone Their Decisions. These Psychological Influences Interact With Technological Features Such As Personalised Recommendations, Push Notifications, One-Click Ordering, And Digital Loyalty Programmes, Creating A Shopping Environment That Encourages Rapid And Often Unplanned Purchasing Behaviour (Moghddam Et Al., 2024; Bao & Yang, 2022).

Given The Continuous Expansion Of Quick Commerce And The Growing Importance Of Technology-Enabled Retailing, Understanding The Psychological Foundations Of Instant Shopping Has Become Increasingly Significant For Both Academic Research And Business Practice. A Comprehensive Examination Of These Behavioural Determinants Can Contribute To A Deeper Understanding Of How Consumers Respond To The Unique Characteristics Of Quick Commerce And How Organisations Can Develop Consumer-Centric Strategies That Align With Evolving Shopping Preferences (Kaur & Sharma, 2024).

Although Quick Commerce Has Gained Considerable Academic And Industrial Attention In Recent Years, The Existing Literature Primarily Focuses On Operational

Efficiency, Delivery Performance, And Technology Adoption. Comparatively Fewer Studies Have Attempted To Integrate The Psychological Determinants That Collectively Influence Consumers' Instant Shopping Behaviour Within The Quick Commerce Ecosystem. This Highlights The Need For A Comprehensive Analytical Review That Brings Together These Behavioural Perspectives Into A Unified Understanding.

Review Of Literature

Jose And Mathews (2025) The Study Adopted A Conceptual And Analytical Approach Based On Existing Market Evidence And Industry Observations To Understand Changing Consumer Purchasing Behaviour In The Fmcg Sector. However, The Study Primarily Focused On The Fmcg Sector And Did Not Comprehensively Examine Other Product Categories Within The Quick Commerce Ecosystem. The Study Provides An Important Foundation For Understanding The Relationship Between Instant Gratification And Impulse Buying In Quick Commerce.

Kaur And Sharma (2024) Conducted A Systematic Literature Review To Examine The Factors Influencing Impulse Buying In Digital Shopping Environments. The Study Identified Psychological, Technological, And Marketing-Related Factors As The Major Drivers Of Impulsive Purchasing Behaviour. The Authors Highlighted That Digital Platforms, Personalised Recommendations, And Convenient Shopping Experiences Encourage Consumers To Make Spontaneous Purchase Decisions. The Review Mainly Examined Digital Shopping Environments And Did Not Specifically Focus On Quick Commerce Platforms. These Findings Provide A Strong Theoretical Foundation For Understanding Instant Shopping Behaviour In The Quick Commerce Environment. Therefore, The Present Review Extends These Findings Specifically To The Quick Commerce Context.

Thurasamy Et Al. (2024) Integrated Multiple Behavioural Theories To Explain Online Impulse Buying Behaviour In Social Commerce. The Study Reported That Trust, Perceived Usefulness, Social Influence, And Consumer Attitudes Play A Significant Role In Encouraging Impulsive Online Purchases. The Study Integrated Multiple Behavioural Theories To Develop A Comprehensive Framework Explaining Impulse Buying In Social Commerce. The Findings Are Useful For Explaining The Psychological Factors That Influence Consumer Behaviour In Quick Commerce. Since

The Study Focused On Social Commerce, The Findings May Not Be Directly Applicable To Quick Commerce Platforms.

Moghddam Et Al. (2024) Explored The Psychological Mechanisms Behind Impulsive Buying Behaviour In Social Commerce. The Study Found That Continuous Scrolling, Attractive Product Presentation, And Engaging Digital Interfaces Increase Consumers' Tendency To Make Spontaneous Purchases. The Study Employed Empirical Analysis To Examine Consumer Interaction With Digital Interfaces In Social Commerce Platforms. The Findings Were Limited To Social Commerce And Require Validation Within Quick Commerce Environments.

Beikverdi Et Al. (2024) Conducted A Systematic Literature Review To Examine The Post-Purchase Effects Of Impulse Buying. The Study Highlighted That Impulse Buying Not Only Influences Immediate Purchase Decisions But Also Affects Consumer Satisfaction, Regret, Loyalty, And Future Buying Behaviour. The Authors Further Proposed A Conceptual Framework Explaining The Complete Impulse Buying Process And Identified Directions For Future Research. The Study Mainly Examined Post-Purchase Outcomes And Did Not Investigate Pre-Purchase Psychological Triggers In Quick Commerce. These Findings Suggest That Understanding Impulse Buying Is Important For Explaining Both Immediate And Repeated Purchasing Behaviour In The Quick Commerce Environment.

Mukhopadhyay (2024) Examined The Major Factors Influencing Consumer Behaviour In The Quick Commerce Environment. The Study Identified Convenience, Delivery Speed, Digital Accessibility, And Changing Consumer Expectations As The Primary Drivers Of Quick Commerce Adoption. It Further Explained That Consumers Increasingly Prefer Instant Shopping Because Of Time-Saving Services And Effortless Purchasing Experiences. The Study Applied Fuzzy Cognitive Mapping (Fcm) To Analyse The Interrelationships Among Major Drivers Of Quick Commerce Adoption. The Findings Focused Primarily On Technology Adoption And Consumer Behaviour Without Examining Broader Psychological Constructs In Detail.

Chen Et Al. (2023) Investigated The Influence Of Checkout Design And Trust Transfer On Impulse Buying Behaviour In Social Commerce. The Study Found That A Simple And Reliable Checkout Process Increases Consumer Confidence And Encourages Immediate Purchase Decisions. The Authors Suggested That Trust Developed During The Shopping Process Positively Influences Impulsive Buying Behaviour. The Study Examined Trust Within Social Commerce Settings, And

Therefore The Findings Require Further Validation In Quick Commerce Platforms.

Bao And Yang (2022) Examined The Roles Of Serendipity, Trust, And Flow Experience In Influencing Online Impulse Buying Behaviour. The Study Concluded That Consumers Are More Likely To Make Impulsive Purchases When They Trust The Platform And Experience Enjoyable, Uninterrupted Shopping Interactions. Trust Was Identified As An Important Psychological Factor That Reduces Perceived Risk And Strengthens Purchase Intentions. These Findings Help Explain Why Trust Is Essential For Encouraging Instant Shopping Behaviour In Quick Commerce.

Overall, The Reviewed Studies Indicate That Psychological Factors Such As Impulse Buying, Trust, Instant Gratification, Perceived Convenience, And Digital Engagement Play A Significant Role In Shaping Consumer Behaviour Across Digital Shopping Environments. However, The Existing Literature Remains Fragmented Because Most Studies Examine These Behavioural Factors Independently Or Within Broader E-Commerce And Social Commerce Settings. Limited Analytical Review Studies Have Integrated These Psychological Determinants Specifically Within The Quick Commerce Ecosystem. Therefore, The Present Study Attempts To Synthesise These Behavioural Perspectives To Develop A Comprehensive Understanding Of Instant Shopping Behaviour In Quick Commerce.

Research Gap

Existing Studies Have Extensively Examined Individual Psychological Factors Such As Impulse Buying, Trust, Perceived Convenience, Instant Gratification, And Digital Engagement In Online Shopping And Social Commerce. However, The Available Literature Remains Fragmented, As Most Studies Investigate These Behavioural Determinants Separately Rather Than Examining Their Combined Influence On Instant Shopping Behaviour Within The Quick Commerce Ecosystem. Moreover, Limited Analytical Review Studies Have Synthesised These Psychological Perspectives To Provide A Comprehensive Understanding Of Consumer Behaviour In Quick Commerce. Therefore, The Present Analytical Review Attempts To Integrate These Diverse Behavioural Factors, Identify Emerging Trends, And Provide A Holistic Understanding Of Instant Shopping Behaviour While Highlighting Directions For Future Research.

Research Methodology

The Present Study Adopts An Analytical Review Methodology Based Exclusively On Secondary Data. Relevant Literature Was Collected From Peer-Reviewed Journal Articles, Books, Conference Proceedings, Industry Reports, And Credible Academic Databases Including Scopus, Google Scholar, Web Of Science, Emerald Insight, Sciencedirect, And Springerlink. The Literature Search Was Conducted Using Keywords Such As Quick Commerce, Instant Shopping, Consumer Behaviour, Impulse Buying, Instant Gratification, Perceived Convenience, Trust, Digital Engagement, And Consumer Psychology. The Selected Studies Were Critically Examined, Compared, And Synthesised To Identify Major Psychological Determinants, Emerging Behavioural Trends, Research Gaps, And Managerial Implications Associated With Instant Shopping Behaviour In Quick Commerce.

Psychological Factors Influencing Instant Shopping Behaviour In Quick Commerce

Consumer Behaviour In Quick Commerce Is Influenced By Several Psychological Factors That Encourage Consumers To Make Faster And More Spontaneous Purchasing Decisions. Unlike Traditional Shopping, Quick Commerce Offers Immediate Product Availability, Rapid Delivery, And A Convenient Digital Shopping Experience. As A Result, Consumers Often Rely On Psychological Motivations Rather Than Extensive Evaluation Before Making A Purchase. The Major Psychological Factors Influencing Instant Shopping Behaviour Are Discussed Below.

Impulse Buying

Impulse Buying Refers To An Unplanned Purchase Made Without Prior Intention. In Quick Commerce, Features Such As Attractive Discounts, Personalised Recommendations, And Ultra-Fast Delivery Often Encourage Consumers To Buy Products Spontaneously. The Ease Of Ordering And Immediate Product Availability Further Reduce The Time Available For Careful Decision-Making. Therefore, Impulse Buying Has Become One Of The Key Psychological Factors Influencing Instant Shopping Behaviour (Jose & Mathews, 2025; Kaur & Sharma, 2024).

Instant Gratification

Instant Gratification Is The Desire To Satisfy A Need Immediately Rather Than

Waiting For Future Benefits. Quick Commerce Fulfils This Expectation By Delivering Products Within A Short Period, Making Shopping Faster And More Convenient. The Ability To Receive Products Almost Instantly Increases Consumer Satisfaction And Encourages Repeated Use Of Quick Commerce Platforms. Thus, Instant Gratification Plays An Important Role In Shaping Instant Shopping Behaviour (Jose & Mathews, 2025).

Perceived Convenience

Perceived Convenience Refers To Consumers' Belief That A Shopping Platform Saves Time And Effort. Quick Commerce Allows Consumers To Place Orders Easily Through Mobile Applications, Complete Secure Digital Payments, And Receive Products Quickly Without Visiting Physical Stores. This Convenience Makes The Shopping Process Simple And Efficient, Encouraging Consumers To Make Instant Purchasing Decisions (Mukhopadhyay, 2024).

Trust

Trust Reflects Consumers' Confidence In The Reliability And Credibility Of A Quick Commerce Platform. Factors Such As Secure Payment Systems, Product Quality, Accurate Information, And Timely Delivery Help Build Consumer Trust. When Consumers Trust A Platform, They Are More Willing To Make Repeat Purchases And Depend On It For Their Daily Shopping Needs. Therefore, Trust Positively Influences Instant Shopping Behaviour (Bao & Yang, 2022; Chen Et Al., 2023).

Time Pressure

Time Pressure Arises When Consumers Feel They Have Limited Time To Complete Their Shopping. Busy Lifestyles And Urgent Product Requirements Often Encourage Consumers To Choose Quick Commerce Because It Offers Rapid Delivery And Saves Valuable Time. Under Such Conditions, Consumers Are More Likely To Make Quick Purchasing Decisions With Minimal Comparison Of Alternatives. Hence, Time Pressure Significantly Supports Instant Shopping Behaviour (Mukhopadhyay, 2024).

Digital Engagement

Digital Engagement Refers To Consumers' Interaction With Quick Commerce Platforms Through Mobile Applications, Personalised Notifications, Promotional Offers, And Loyalty Programmes. Regular Interaction With These Digital Features Increases Consumer Involvement And Encourages Frequent Platform Usage. As Consumers Become More Engaged With Digital Shopping Environments, Their Likelihood Of Making Instant Purchases Also Increases (Moghddam Et Al., 2024).

In Addition To The Major Psychological Factors Discussed Above, Several Emerging Behavioural Drivers Also Contribute To Instant Shopping Behaviour In Quick Commerce. Factors Such As Fear Of Missing Out (Fomo), Hedonic Motivation, Social Influence, Scarcity Messages, And Habit Formation Further Encourage Consumers To Make Faster Purchasing Decisions. These Behavioural Influences Complement Impulse Buying, Convenience, And Instant Gratification, Making Quick Commerce An Increasingly Attractive Shopping Option For Modern Consumers (Moghddam Et Al., 2024).

Emerging Trends In Quick Commerce:

Ai Recommendations

Artificial Intelligence Helps Quick Commerce Platforms Analyse Consumer Preferences And Recommend Products Based On Previous Purchases And Browsing History. These Personalised Suggestions Encourage Faster And More Relevant Purchase Decisions (Mukhopadhyay, 2024).

Hyper-Personalization

Hyper-Personalization Uses Consumer Data To Provide Customised Offers, Product Recommendations, And Shopping Experiences. This Improves Customer Satisfaction And Increases The Likelihood Of Instant Purchases (Moghddam Et Al., 2024).

Voice Commerce

Voice Commerce Enables Consumers To Search And Order Products Using Voice Assistants Or Voice Commands. It Simplifies The Shopping Process And Makes Purchasing Quicker And More Convenient (Thurasamy Et Al., 2024).

One-Click Ordering

One-Click Ordering Reduces The Number Of Steps Required To Complete A Purchase. This Feature Saves Time, Minimises Purchase Effort, And Supports Instant

Shopping Behaviour (Chen Et Al., 2023).

Subscription Models

Subscription Services Allow Consumers To Receive Frequently Used Products Automatically At Regular Intervals. This Improves Convenience, Encourages Repeat Purchases, And Strengthens Customer Loyalty (Mukhopadhyay, 2024).

Dark Stores

Dark Stores Are Small Fulfilment Centres Established Exclusively For Online Order Processing And Rapid Delivery. They Enable Quick Commerce Platforms To Provide Faster And More Efficient Delivery Services (Jose & Mathews, 2025).

Predictive Delivery

Predictive Delivery Uses Data Analytics And Artificial Intelligence To Estimate Future Consumer Demand And Prepare Inventory In Advance. This Helps Reduce Delivery Time And Improves Overall Service Efficiency (Mukhopadhyay, 2024).

Digital Payments

Secure And Convenient Digital Payment Methods Simplify The Checkout Process And Reduce Transaction Time. Faster Payment Systems Encourage Consumers To Complete Purchases Without Delay (Bao & Yang, 2022).

Quick Grocery Ecosystem

The Quick Grocery Ecosystem Integrates Digital Platforms, Hyperlocal Warehouses, Delivery Partners, And Technology To Provide Daily Essential Products Within A Short Period. This Ecosystem Supports The Growing Demand For Fast, Convenient, And Technology-Enabled Shopping Experiences (Jose & Mathews, 2025).

Gamification

Gamification Refers To The Use Of Reward Points, Badges, Streaks, And Limited-Time Challenges To Increase Customer Engagement. These Interactive Features Encourage Consumers To Revisit Quick Commerce Platforms More Frequently And Make Repeated Purchases, Thereby Strengthening Instant Shopping Behaviour.

Challenges In Quick Commerce

1. Impulse Buying And Overconsumption

The Convenience Of Instant Delivery And Attractive Promotional Offers Often Encourage Unplanned Purchases, Leading To Excessive Consumption And

Unnecessary Spending.

2. Consumer Privacy And Data Security

Quick Commerce Platforms Rely Heavily On Consumer Data For Personalised Recommendations, Making Data Privacy And Security A Significant Challenge.

3. Consumer Trust And Service Reliability

Maintaining Product Quality, Accurate Information, And Consistent On-Time Delivery Is Essential For Building And Retaining Consumer Trust.

4. Environmental Sustainability

Frequent Deliveries And Excessive Packaging Increase Environmental Concerns, Making Sustainable Operations A Major Challenge For Quick Commerce Platforms.

Managerial Implications: Improve Customer Trust

Quick Commerce Platforms Should Strengthen Consumer Trust By Ensuring Secure Payment Systems, Accurate Product Information, And Reliable Delivery Services. Greater Trust Encourages Repeat Purchases And Long-Term Customer Relationships.

Personalized Marketing

Platforms Should Use Consumer Preferences And Purchase History To Provide Personalised Product Recommendations And Promotional Offers. This Helps Improve Customer Experience And Increases Purchase Intentions.

Ethical Notifications

Promotional Messages And Push Notifications Should Be Relevant, Transparent, And Non-Intrusive. Ethical Communication Can Enhance Customer Satisfaction Without Encouraging Excessive Or Misleading Purchasing Behaviour.

Better App Design

A Simple, User-Friendly, And Well-Organised Mobile Application Can Improve The Shopping Experience. Easy Navigation And A Smooth Checkout Process Encourage Faster Purchasing Decisions.

Loyalty Programmes

Reward Points, Discounts, And Membership Benefits Can Encourage Repeat Purchases And Strengthen Customer Loyalty. Effective Loyalty Programmes Also Improve Long-Term Customer Engagement.

Responsible Marketing

Marketing Strategies Should Focus On Creating Value For Consumers Rather Than Encouraging Unnecessary Purchases. Responsible Promotional Practices Help Build A Positive Brand Image And Consumer Trust.

Consumer Retention Strategies

Quick Commerce Platforms Should Emphasise Service Quality, Timely Delivery, And Effective Customer Support To Retain Existing Customers. Strong Retention Strategies Contribute To Customer Satisfaction And Sustainable Business Growth.

AI-Based Consumer Analytics

Quick Commerce Firms Should Use Ai-Driven Consumer Analytics To Better Understand Purchasing Behaviour, Personalize Shopping Experiences, And Improve Long-Term Customer Retention While Ensuring Ethical Use Of Consumer Data.

Key Findings Of The Study

1. Impulse Buying, Instant Gratification, And Perceived Convenience Are Key Psychological Factors Driving Instant Shopping Behaviour In Quick Commerce.
2. Trust, Time Pressure, And Digital Engagement Increase Purchase Intentions By Making Shopping Faster And More Reliable.
3. Technologies Like Ai Recommendations, Digital Payments, And One-Click Ordering Enhance Consumer Engagement And Quick Decision-Making.
4. Consumer Psychology Plays A More Important Role Than Technological Convenience In The Growth Of Quick Commerce.
5. Personalized Marketing And Targeted Recommendations Further Influence Consumer Behaviour By Creating A More Engaging And Tailored Shopping Experience.

Future Research Directions

AI-Driven Consumer Behaviour

Future Studies May Examine How Artificial Intelligence Influences Consumer Decision-Making And Instant Shopping Behaviour In Quick Commerce. Research Can Also Explore The Impact Of Ai-Based Recommendations On Purchase Intentions And Customer Satisfaction.

Gen Z Shopping Psychology

Future Research May Investigate The Psychological Factors Influencing Gen Z Consumers In The Quick Commerce Environment. Understanding Their Shopping Preferences And Digital Behaviour Can Provide Valuable Insights For Marketers.

Rural Consumers

Most Existing Studies Focus On Urban Consumers, While Limited Attention Has Been Given To Rural Markets. Future Studies May Compare The Shopping Behaviour And Adoption Of Quick Commerce Among Rural And Urban Consumers.

Sustainable Quick Commerce

Future Researchers May Examine How Sustainability Initiatives Influence Consumer Attitudes Towards Quick Commerce. This May Include Green Packaging, Eco-Friendly Delivery Practices, And Environmentally Responsible Consumer Behaviour.

Cross-Cultural Comparison

Future Studies May Compare Consumer Psychology And Instant Shopping Behaviour Across Different Countries Or Cultural Settings. Such Comparisons Can Help Identify Similarities And Differences In Consumer Decision-Making.

Ethical Issues

Future Research May Explore Ethical Concerns Related To Personalised Marketing, Consumer Privacy, And Data Security In Quick Commerce. These Issues Are Becoming Increasingly Important In Digital Shopping Environments.

Mental Health And Instant Shopping

Future Studies May Investigate The Relationship Between Instant Shopping Behaviour And Consumers' Emotional Well-Being. Understanding This Relationship Can Provide Insights Into Responsible Digital Consumption.

Behavioural Addiction

Future Research May Examine Whether Frequent Use Of Quick Commerce Platforms Leads To Compulsive Buying Or Behavioural Addiction. Such Studies Can Contribute To A Better Understanding Of Long-Term Consumer Behaviour.

Omnichannel Consumer Behaviour

Future Studies May Compare Consumer Behaviour Across Quick Commerce, Traditional E-Commerce, And Offline Retail Channels To Understand How Shopping Preferences Vary Across Different Purchasing Environments.

Conclusion

The Continuous Evolution Of Quick Commerce Has Fundamentally Changed Consumer Purchasing Behaviour By Combining Technological Innovation With Convenience-Oriented Retail Services. The Reviewed Literature Indicates That Consumers Increasingly Prefer Instant Shopping Because Of Psychological Motivations Such As Impulse Buying, Instant Gratification, Trust, Perceived Convenience, Time Pressure, And Digital Engagement. These Factors Not Only Influence Purchase Decisions But Also Determine The Frequency And Speed Of Transactions In Quick Commerce Platforms. The Reviewed Literature Further Indicates That Technological Innovations Such As Ai-Driven Recommendations, Digital Payment Systems, And One-Click Ordering Strengthen These Psychological Influences, Making The Shopping Process More Seamless And Engaging. Overall, The Present Analytical Review Provides An Integrated Understanding Of The Psychological Foundations Of Instant Shopping Behaviour In Quick Commerce. The Findings Offer Valuable Implications For Researchers, Marketers, And Platform Managers While Establishing A Conceptual Foundation For Future Research In Technology-Enabled Retailing.
